

servoStepper::completeTask

servoStepper::setPosition

servoStepper::updatePosition

```
graph LR; A[servoStepper::completeTask] --> C[servoStepper::updatePosition]; B[servoStepper::setPosition] --> C;
```

The diagram illustrates a functional dependency or call sequence. Two functions, `servoStepper::completeTask` and `servoStepper::setPosition`, are shown on the left. Both have blue arrows pointing to a single function, `servoStepper::updatePosition`, which is highlighted with a gray background. This suggests that `updatePosition` is a common operation or a state update that is triggered by either completing a task or setting a new position.
